

Network Designer Medior

Function type: Freelance - Vast **Location:** Namur
Duration: Longterm **Reference:** 202008016

Description:

Role description:

The Network Designer is responsible for the design, management & maintenance of the cable network and follow-up of bigger scale projects in his/her region

Required Responsibilities:

Main goal is to study the impact of any internal or external trigger on the network architecture. This study is done by consulting the inventory databases, and other information available. The result of this study is a plan (high level or detailed) describing the solution and takes into account; network optimisation, limiting network complexity, lowering investment and operating costs, and the ease of network construction. Focus is on medium to large projects, with considerable budgetary and network impact

Requirements:

Degree & Experience

- Bachelor degree (IT, Surveying, geography or similar)
- Experience in the telecom world
- Previous experience in road works and/or utility works is beneficial

Technical skills:

- Good knowledge of AutoCad, QGIS or similar
- Good knowledge of MS Office
- Experience in the telecom world
- Good special awareness, easily recognizing patrons
- Ability to approach a technical issue with an analytical mind

Attitudes/Behavior:

- Able to work independently and organize and prioritize your work
- Analytical insight
- Fluent and professional communication skills
- Flexible and stress resistant
- Able to stay positive and constructive under difficult circumstances
